EDUCATION

Virginia Tech | B.S. Computer Science | Expected May 2028

Relevant coursework: Intro to Computer Organization II (in progress).

Northern Virginia Community College | Computer Science | Sep. 2024 - May 2026

GPA: 3.55/4.0

EXPERIENCE & RESEARCH

Procentrix | Software Engineering Intern | Jun. - Aug. 2026

- Developed a reusable backend template with **Node.js, TypeScript, and SQL Server**, separating data-access and service layers for enterprise applications.
- Implemented REST APIs with authentication, authorization, input validation, and database-access safeguards.
- Built a financial risk assessment interface with **React, Microsoft Dataverse, and Fluent UI**, including reusable master-detail components for relational financial and firm data.
- Published a Claude Code plugin marketplace for shared engineering resources; authored React/TypeScript scaffolding and Dataverse authentication guidance.

Virginia Tech | Undergraduate Researcher & Group Lead | Sep. 2026 - Present

VTURCS Undergraduate Research Lab (Matching + Semantic Search)

- Develop a semantic search and matching system for student research opportunities; lead one of three groups under faculty supervision.
- Planned work includes system testing, evaluation, and preparation for publication.

SELECTED OPEN-SOURCE CONTRIBUTIONS

- **Microsoft PowerToys**: Fixed Quick Accent window sizing to prevent character clipping and horizontal shifts at fractional display scaling. Merged PR #49402.
- **NASA-AMMOS/MMGIS**: Preserved development startup logs in terminal scrollbar by removing an interactive terminal clear; added regression coverage. Merged PR #1029.
- **GitType**: Handled terminal resize events to redraw the active screen immediately, with regression tests. Merged PR #478.

PROJECTS

Deepwoken.trade | Jun. 2026 - Present

- Built a marketplace supporting **1,000+ users**, with trade posts, item markets, reputation profiles, Discord OAuth, Roblox verification, and PostgreSQL persistence through Prisma.
- Deployed a Dockerized **Next.js** application with AWS, Terraform, and GitHub Actions; subsequently migrated to Oracle Cloud hosting and Supabase PostgreSQL.

Aeyori / KarutaBot | Mar. 2026 - Present

- Developed an open-source OCR automation tool with **Python, FastAPI, EasyOCR, Selenium, and PostgreSQL**; built a hosted dashboard with authentication and license management.

LegendWatch | Mar. 2026 - Present

- Created a **Java/Fabric** Minecraft mod that parses public events, maintains match state, and renders item-tracking indicators; reached **2,000+ downloads** across Modrinth and CurseForge.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C#, SQL

Frameworks & Data: React, Next.js, Node.js, FastAPI, PostgreSQL, SQL Server, Prisma, Dataverse

Tools & Infrastructure: Docker, Terraform, GitHub Actions, Git, Linux, AWS, Oracle Cloud
